# Pompon and Decorative Commercial Varieties

The term pompon is applied to those varieties which are of the true rounded type, and those very nearly approaching this type.

Decorative varieties are those which are a distinct departure from the rounded type. Their flowers are less compact, partly reflexed and display more of the color of the inner side of the petals.

Size of flower is indicated by S—small; Int.—intermediate; L—large.

HIGHLAND PARK GREENHOUSES, Dec. 1, 1936.

"We wouldn't think of replanting a bench or groundbed, no matter what it consists of, after the soil has been worked over, without applying a good dose of To-Na-Cide and lightly working the same into the surface. We have found this insecticide by far the most efficient weapon to get rid of and keep under control sow bugs and many other insect pests usually found in soil made use of under glass."

FRITZ BAHR, Highland Park, Ill.

Molndal, Sweden, October 11, 1938.

"Please ship me one ton of your To-Na-Cide. I have had very good results using it to kill Thrips, Worms, and other insects in the soil and also for pot plants. I must say I cannot get along without it now."

Yours truly, M. E. GREN

North Wales, Pa., September 27, 1939.

"We used To-Na-Cide this summer for the exclusive purpose of killing what we call sow bugs. As far as we can see, the results have been satisfactory.

"We also find this material good for the control of strawberry beetles."
